

Added
Document upload with a name
Viewable date and time on the page
Downloading documents works
Limited to .txt, .rtf and .pdf for safety
Renaming and replacing possible
Deletion archives document
Needs two different databases in authentication
Generate authentication, role integer:
Log in and Out handled in rails as per usual

Next step

Customer and Admin, Admin restrict files using marking, same as important marking

Folders

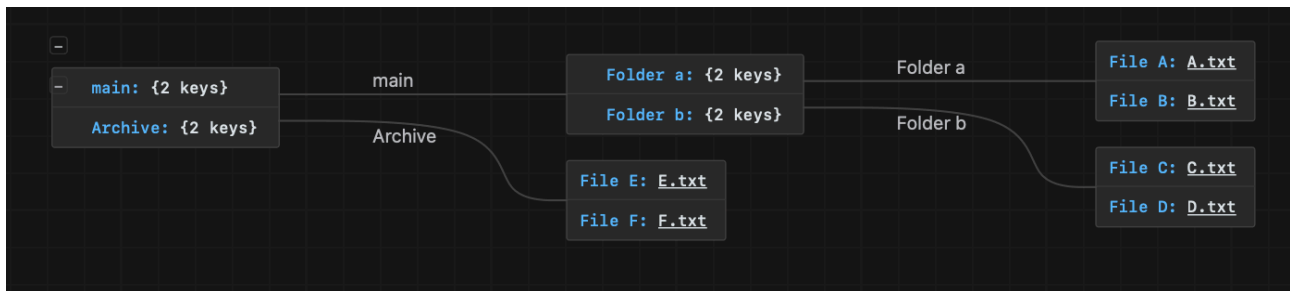

May need more than one db to be used and made.

Transfer files between folders

Needs a master db for folders

Needs a master directory for folders

Sechma possibly below

Admin restrictions and Document marking

Can be done with a database point for each one, and send restrictions that way.
